

ACCESS UNIFIED NETWORKS Teaches Customers What to Watch Out For When Taking Their Voice Technology to the Cloud

Leading Provider Educates Companies on the Proper Path to Success

SPOKANE, WA – September 22, 2015 - Access Unified Networks, a leading provider of unified communications, announced today that the company has launched an awareness campaign to its customers educating them on how to transition their phones and infrastructure technology to the cloud. The core message that Access Unified Networks is sharing is the migration of your company's technology to the cloud can be either the best thing you've ever done or the worst thing. Most companies are drawn to the immediate slash in expenses and expanded functionality, which is the main driver behind the widespread adoption of cloud voice. Access Unified Networks has summarized the main points that their customers need to know about in order to make this transition as smooth as possible.

The first decision that a business owner needs to be aware of is that there are two distinct ways of purchasing the technology. In the world of cloud-technology, especially that of cloud voice, this is particularly important to sort out. The first way is to purchase the technology from off the Internet. This method is very attractive to first-time buyers because the only things that a purchaser needs to know is how many phones their office will need and how many lines they will need to route calls. They plug these numbers in, get a price, purchase them, the phones are then boxed up, shipped out and

the only instructions for installation are to plug them into the wall. However, while this method is faster at the outset, it usually causes big problems shortly thereafter. For example, cloud phones only work well when there is enough bandwidth available for them to utilize. When a company just plugs their cloud phones into the wall, without assessing the network to make sure that it can support this technology, a company predestines itself for failure. This can be avoided, by taking the time to do a network analysis.

When an organization purchases cloud phones from the Internet, there are plenty of challenges like the above example, that crop up. With hundreds of these types of companies sprouting up, they usually have a very-short term, transactional approach to business. This philosophy leads to them not taking the time to properly understand their customer's business, find out what their customer would like to accomplish and to assess what would be the most ideal way to utilize technology to accomplish that objective. Furthermore, online cloud voice providers have a mindset of "dialing for dollars" and once the equipment is sold and shipped they essentially walk away from any form of customer service. In response to high cancellation rates, many of these companies have required customers to enter long-term contracts, trapping them into a forced relationship.

A much more intelligent way to purchase this technology is through a reputable, local provider who is

part of your business community. By taking this route, the company inherently has a higher capacity to understand your business objectives and strategic outcomes, which ultimately leads to perfectly fitting technology. Local providers understand the need to perform an initial analysis to gain a global perspective on your technology infrastructure, and can often make improvements that not only ensure the quality of your cloud phones, but of all technology that runs on the network. Other signs that you are dealing with a reputable provider is that they take the time to educate you on firewalls, they ensure proper bandwidth allocation and explain QoS (Quality of Service) as well. These all have giant implications on the performance of the technology on your LAN (Local Area Network). Another great sign is when the company has highly experienced, certified technicians who can install the technology themselves, instead of leaving it in the hands of their customers, who are not trained in these facets. However, the most important factor to watch for, which ensures aligned incentives from the beginning, is month-to-month contracts. When a provider puts their "money where their mouth is" and essentially says that "If the technology doesn't perform as expected, you can cancel anytime," you are predestined for a mutually beneficial relationship. Access Unified Networks is one such provider and they recommend that whoever you do business with, even if it's not Access Unified Networks, you make sure that

you're dealing with a reputable provider who meets these conditions.

While it's completely clear that dealing with a reputable company is the most intelligent way to purchase technology and migrate to the cloud, this begs the question of affordability. The punch line for business owners is that whether they purchase from an online company or from a reputable company, the price they ending up paying is the same! This was the catalyst for Access Unified Networks' desire to launch this awareness campaign.

"Our goal is to let the performance of our technology speak for itself," stated Kent Biel, President of Access Unified

Networks. "We earn our relationships with customers by building a strong relationship, earning their trust month-by-month and taking responsibility for the performance of their technology as if it were our own business. We are playing the long-term game and the results have been excellent so far. We aspire to be an example of what's possible in a true partnership, where our customers' success is our success."

ABOUT ACCESS UNIFIED NETWORKS

Access Unified Networks offers what today's business customer demands: exceptional customer service, quality products

and a variety of network and voice solutions. Creating a unified network strategy is vital to doing business in an increasingly competitive world. Access Unified Networks helps customers create a plan that will accommodate their businesses into the next decade. Their team of Factory Certified technicians are dedicated to providing unsurpassed customer service and technical support. The company is committed to supporting its customers' every need, leading the way through the challenges of the ever-changing world of technology. For more information on Access Unified Networks, call (888) 621-9555 or visit www.accessunified.net.
